

Electrification Projects

With the objective of achieving total electrification across the coastal stretch, the Department of Fisheries has undertaken extensive initiatives in a time-bound and mission-oriented manner. The works include the installation of transformers, laying of high-tension (HT) lines, erection of electric posts, and internal wiring in coastal habitations and fishery-related infrastructure. These efforts aim to ensure uninterrupted and reliable power supply, thereby improving the quality of life and supporting the livelihood activities of coastal communities.
