

Modern Hygienic Fish Markets

In order to improve the state's fish market infrastructure, it is proposed to modernize the existing markets with a state-of-the-art design. This includes building well-equipped facilities for retail and wholesale fish marketing, implementing solid and liquid waste treatment systems, constructing a well-connected drainage system, providing potable water facilities, adding resting rooms and chilling units, and constructing storage rooms. These upgrades will ensure the markets have the necessary infrastructure to efficiently and effectively serve the needs of both vendors and customers.

Some objectives of the project:

- To modernize the infrastructure of existing fish markets
- To ensure hygienic handling and storage of fish and fishery products. It helps to extend the shelf life of the produce and to extend the period of marketing.
- To avoid usage of health hazard preservatives in fishes
- To provide fresh fish to potential consumers in dressed and ready to cook form.
- To revitalize export and domestic market.
- To reduce wastage of fish by ensuring maximum utilization of harvested fish and by retarding the rate of spoilage reactions.
- To create a cold chain linkage from the production point to the customer thereby saving the fishermen/ fish farmer from forced distress sale during glut.
- To increase the availability of nutritionally enriched food in the open market.
- To ensure higher price realization by fishermen/ fish farmers and increase their income. viz., to create more value for effort.
- To ensure continuous market supply chain to those women SHG who involve in the production of value-added fish products.
- To help to increase the consumption of fish by local people.
- To increase employment opportunities in the rural sector.
- Empowerment of Fisher folk women.
